

REETHA KABBALU MYLARU, PHARMD, MPH

Boston, MA | reetha9741@gmail.com | (283) 210-7605 | [linkedin.com/in/reetha-km](https://www.linkedin.com/in/reetha-km) | <https://github.com/reethakm99> |

PROFESSIONAL SUMMARY

Biostatistician and Epidemiologist (MPH / PharmD) with over 3 years of clinical research and data management experience, specializing in large-scale longitudinal datasets and complex clinical registries, including cardiovascular outcomes research. Highly proficient in building advanced statistical modeling pipelines, executing data extraction, and automating publication-ready tables and figures (TLFs) using SAS (BASE, STAT, MACRO, ODS) and R (lme4, survey). Experienced in data storage and management using Excel, Microsoft Access and relational databases; skilled in applying epidemiological and quality-assurance principles to multi-site, IRB-compliant research. Proven record collaborating with Principal Investigators and supporting research fellows and staff on statistical programming.

EDUCATION

Master of Public Health – Epidemiology & Biostatistics | *GPA: 3.63* | **Sep 2024 - May 2026**

Boston University School of Public Health

Boston, MA

Coursework: Epidemiology of Vaccine-Preventable Diseases, Epidemiological Methods, Infectious Disease Epidemiology

Doctor of Pharmacy (PharmD) | *GPA: 3.8* | **Aug 2016 – Dec 2022**

Rajiv Gandhi University of Health Sciences - *International degree; equivalent to 6-year doctorate* | Bangalore, India

Coursework: Biostatistics, Clinical Research, Pharmacoepidemiology

SKILLS

Programming & analysis tools: R (multivariable regression, longitudinal modeling, ggplot2, lme4), SAS BASE; SAS/STAT (PROC REG, PROC MIXED, PROC LOGISTIC); SAS/GRAPH (PROC GPLOT, PROC SGLOT); SQL (PROC SQL); ODS (RTF/PDF/HTML output); macro development

Statistical methods: Repeated measures ANOVA, mixed-effects models, multivariable logistic and linear regression, survival analysis, longitudinal data analysis, disease frequency and distribution analysis, sample size & power calculations

Database & data management: Microsoft Access (table design, relationships, query development), REDCap, electronic health records (EHR) data extraction, public health surveillance databases.

Research design & regulatory: IRB submissions & amendments, HIPAA-compliant research, SAP development, audit-ready documentation, pharmacovigilance, disease surveillance, informed consent procedures

Scientific communication: Manuscript preparation, conference presentation, stakeholder reporting, data visualization, poster development, abstract writing, literature review, grant/proposal writing.

Microsoft Office: Excel (dashboards, Pivot Tables, data cleaning), Power BI, Word, PowerPoint, Outlook.

WORK EXPERIENCE

Graduate Research Assistant (Part-Time) | **April 2026 – May 2026**

Department of Psychiatry | *Boston University*

Boston, MA

- **Analysis Plan:** Led analysis plan development for an epidemiological study examining chronic comorbidities within a Kenyan psychosis cohort, supporting a peer-review-targeted manuscript.
- **Statistical Modeling:** Built and validated logistic and Poisson/negative binomial regression models in R, selecting model specification via overdispersion testing; produced reproducible diagnostic scripts & structured code documentation.

Graduate Research Assistant (Part-time) | **May 2025 - May 2026**

Global Health Department | *Boston University*

Boston, MA

- **Data Integration & Management:** Synthesized 890+ peer-reviewed publications and government/climate datasets (IMD/ERA5) into 84 analysis-eligible sources for a CEID-funded study, evaluating climate extremes and zoonotic/AMR risks.
- **Statistical Programming & Pipeline Development:** Built a hierarchical coding framework in R to extract & classify variables across 3 risk domains, transforming unstructured literature into analysis-ready datasets for cross-institutional reporting.
- **Reporting & Data Visualization:** Generated descriptive frequency summaries and tables across 84 included studies using R and Excel for senior investigator review.
- **Dissemination & Regulatory Compliance:** Presented data insights at the BU Annual Health Data Science Session; contributed to abstract & manuscript preparations; managed the regulatory pipeline to secure first-cycle IRB approval.

Student Office Assistant

Jun – Aug 2025

Research Occupational Health Program (ROHP) | *Boston University*

Boston, MA

- Maintained EHR-based occupational health and medical surveillance databases (Enterprise Health) for research personnel, achieving 100% data accuracy and audit-ready, HIPAA-compliant recordkeeping.

Clinical Pharmacologist

Jan 2023 – Dec 2023

Aster Hospitals

Bangalore, India

- Conducted systematic ADR safety surveillance across critical care units and designed standardized adverse-event reporting workflows aligned with DSMB criteria.

Graduate Student Research Assistant | Community-Based Interventional Research

Dec 2021 - Dec 2022

Rajiv Gandhi University of Health Sciences

Bangalore, India

- Community health assessment: Managed field coordination for a 1,099-participant quasi-randomized interventional study in rural Karnataka, India, evaluating comparative effectiveness of two health interventions on anemia & depression.
- Protocol & Regulatory Design: Designed IRB-compliant multisite recruitment, informed consent & data collection protocols across rural field sites; co-authored all regulatory documentation and secured institutional IRB approval.
- Data Quality & Validation: Conducted data quality, missingness and variable validation checks on 1,099-participant datasets via SAS, maintaining protocol fidelity using WHO-validated diagnostics (MDI; DSM-IV/ICD-10).

GRADUATE PUBLIC HEALTH PROJECT

Diabetes & Cardiovascular Disease Risk Analysis | Framingham Heart Study Cohort (N=2,998)

- Pipeline Development: Integrated multi-wave demographic and clinical datasets in R to evaluate long-term cardiovascular outcomes across a 20-year longitudinal human cohort.
- Epidemiological Modeling: Conducted formal covariate screening and quantitative confounding assessments using the 10% change-in-estimate rule to optimize final model specifications.
- Multivariable Regression: Executed crude and multivariable logistic regression to estimate diabetes-associated CVD risk (adjusted OR=2.87, 95% CI: 2.14–3.83); confounding assessment via the 10% change-in-estimate rule showed a 24.74% shift, confirming the need for covariate adjustment.

Cumulative Diarrheal Illness & Household Medicine Expenditure | Cebu Longitudinal Health & Nutrition Survey

- Large-Scale data integration: Merged three high-dimensional longitudinal SAS datasets (39,924 observations, N=3,327, 12 waves) into a unified analytic file using SAS PROC SQL, sub-setting, recoding, formatting variables to meet investigator goals.
- Advanced Zero-Inflated Modeling: Engineered a two-part statistical pipeline combining PROC LOGISTIC and PROC REG to resolve a 35.6% zero-inflation barrier in household medicine expenditure data.
- Effect Modification & Results: Quantified that each diarrheal wave raised medicine purchase odds by 19% (OR=1.19, 95% CI: 1.04–1.37) and increased expenditure by 11.72 pesos (p=0.002); evaluated urban residence as a significant effect modifier that amplified disease burden in the wealthiest tertile.

Longitudinal Cognitive Decline Analysis | Framingham Heart Study (N=900)

- Database Merging: Formatted, recoded and merged demographic, laboratory & neurological databases using SAS to construct clean, analysis-ready datafile.
- Model diagnostics & Reporting: Executed multivariable linear regressions (F=14.21, p<0.0001, R²=0.146) adjusting for age, sex, education, and smoking history while validating linear assumptions via residual diagnostics.
- Advanced Variable Selection: Evaluated clinical effect modification by sex on neurological associations and applied LASSO regression methods (SBC criterion) to identify independent predictors of decline.

PRESENTATIONS AND MANUSCRIPTS IN PREPARATION

Conference Presentation

- Kabbalu Mylaru R. (2025, September). Animal Ownership and Management and Their Potential Impact on Human Exposure to Animal Waste in the Context of Climate Change [Poster Presentation]. BU Annual Health Data Science Poster Session, Boston University School of Public Health, Boston, MA.

Manuscripts in Preparation

- Scoping review: Animal Ownership, Management practices and Human Exposure risk in the Context of Climate Change, CEID-funded, Global Health Department, Boston University – In preparation
- Chronic physical health comorbidity among young adults with psychosis in Kenya NeuroGap Study, Dept. of Psychiatry, Boston University – In Preparation

CERTIFICATION

CITI Program - HIPAA & Research Data Security (BUMC) - Issued January 2025

CITI Program - Good Clinical Practice (GCP) Biomedical Course (BUMC) – Issued June 2026

CITI Program – Community-Engaged Research (BUMC)– Issued June 2026
